

Which key does what?

Keys at work across the lifecycle

dstack · separate derivation paths

Coordinate DFL

Sign update commitments
Finalize aggregation

secp256k1

Authorize the participant's
blockchain transactions

Exchange models

Sign model packages
Unwrap model-encryption keys

RSA-3072

Derived AES-GCM key
seals the random RSA private key

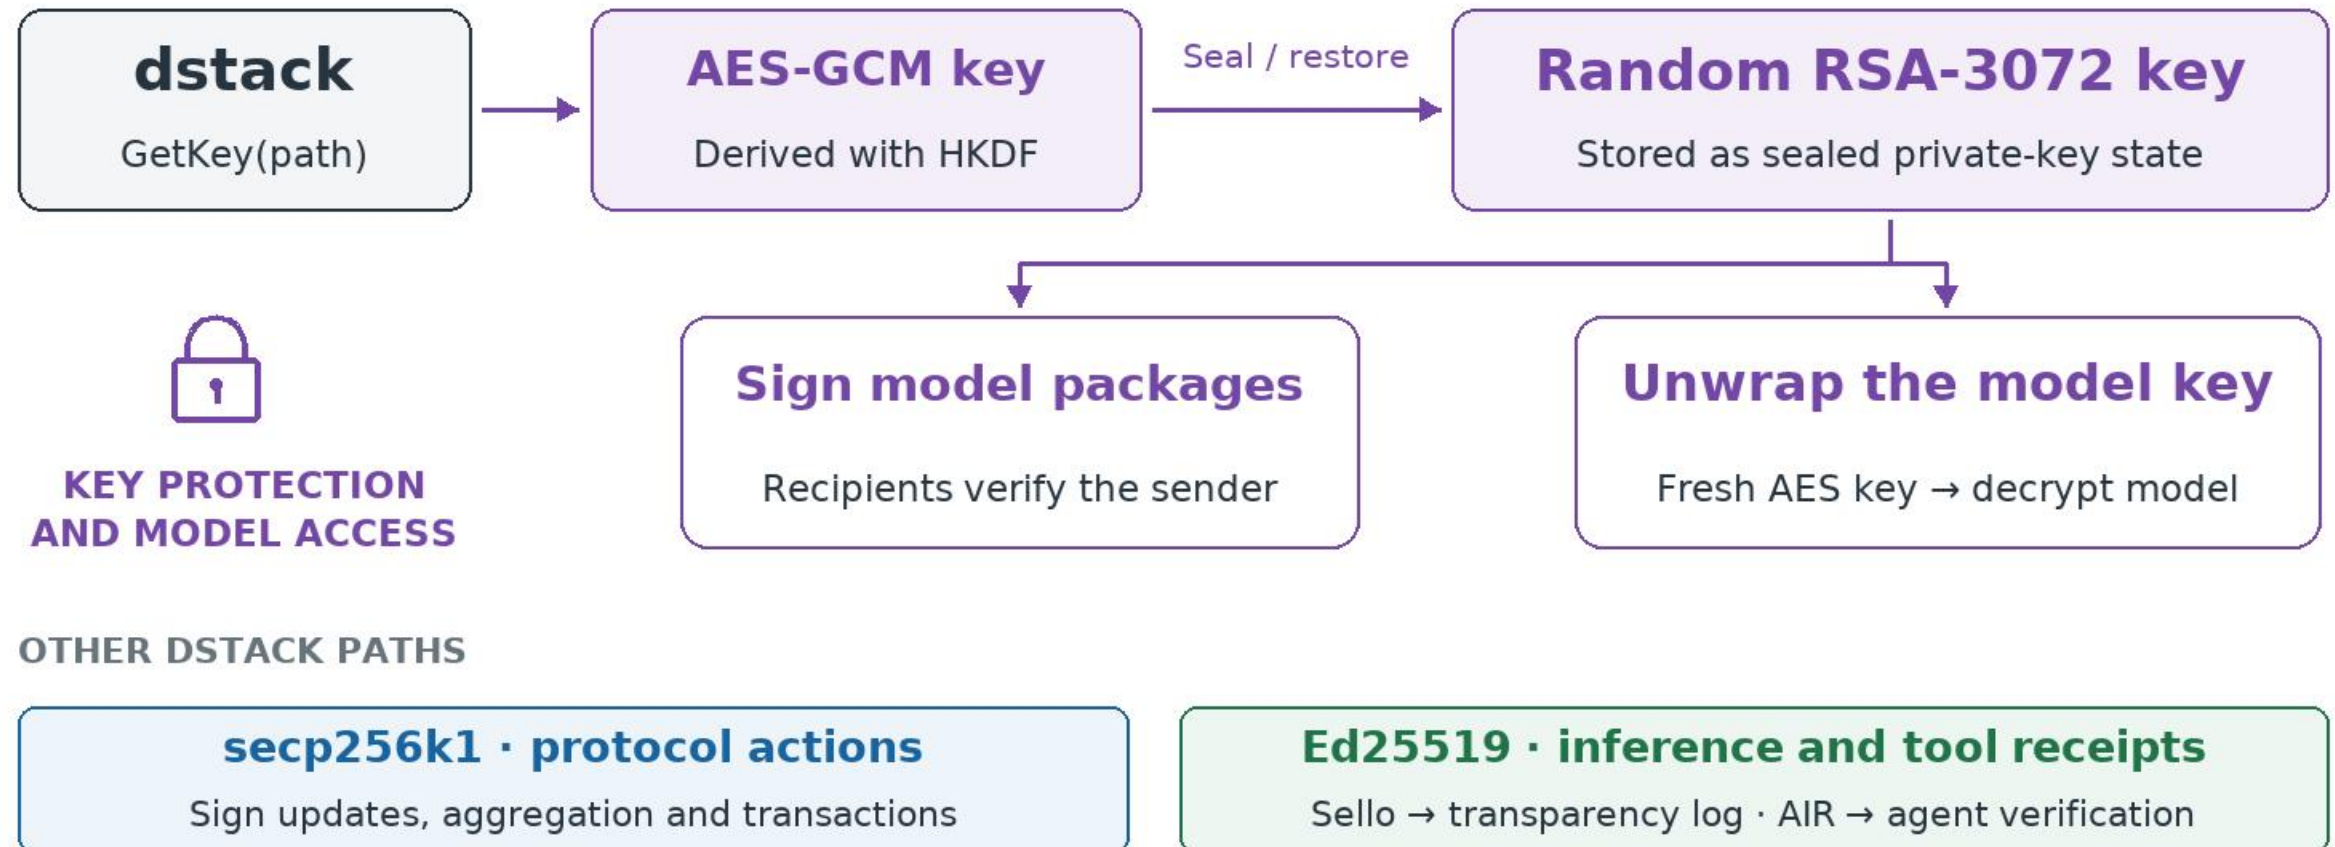

Prove model use

Sign tool receipts
Sign inference evidence

Ed25519 · separate keys

Sello → transparency log
AIR → agent verification

From protected keys to model access

dstack GetKey(path): action, wrapping and receipt keys
