

Sello: the receiver records each tool call

PAPER Service-signed, owner-encrypted receipts in a witnessed log

VITA-FL **Model fetch → Image selection → Inference**

Receiver key: dstack → DeviceRegistry

Prototype differences No independent log witnesses or owner discovery.
Owner decryption and issuer keys live in the agent runtime.

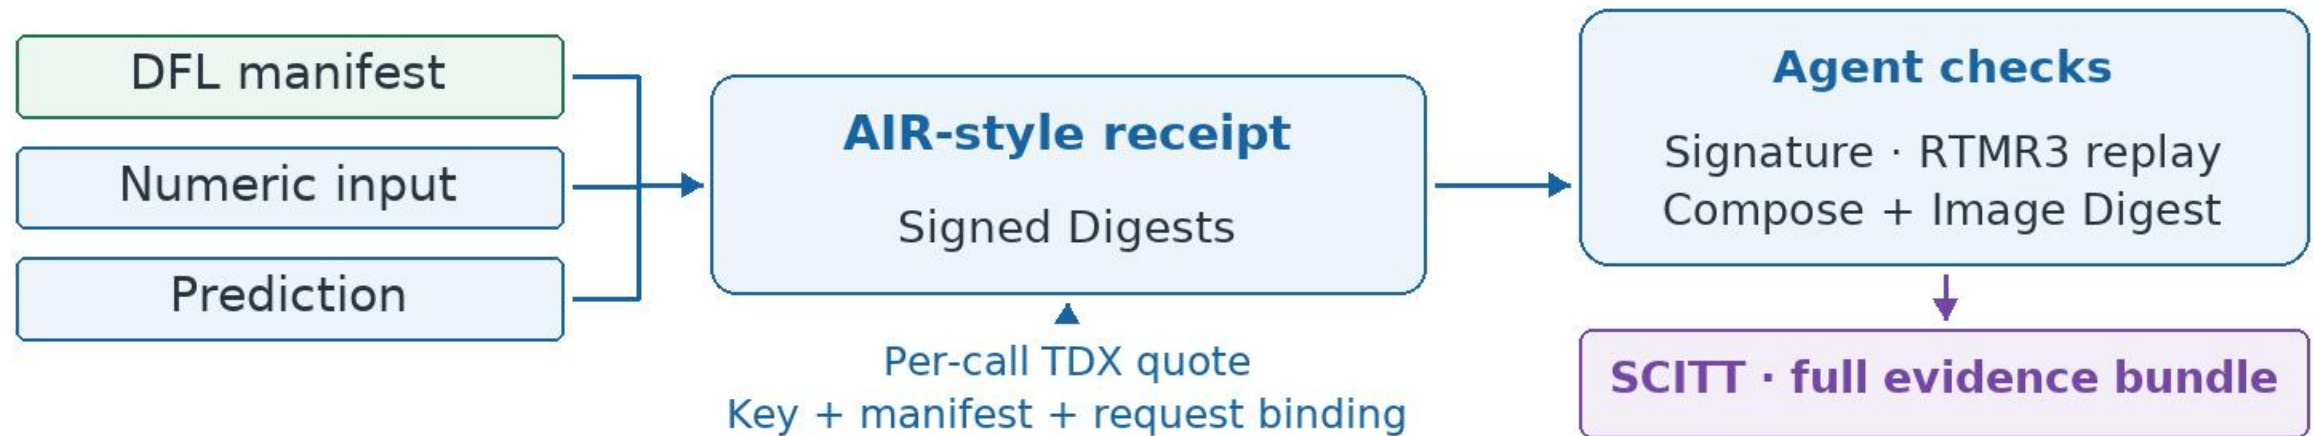

Figuera · Notarized Agents (2026) · arXiv:2606.04193

AIR: connect the prediction to its model

AIR DRAFT

Signed commitments to model, request, response and attestation

VITA-FL

AIR-style

implementation

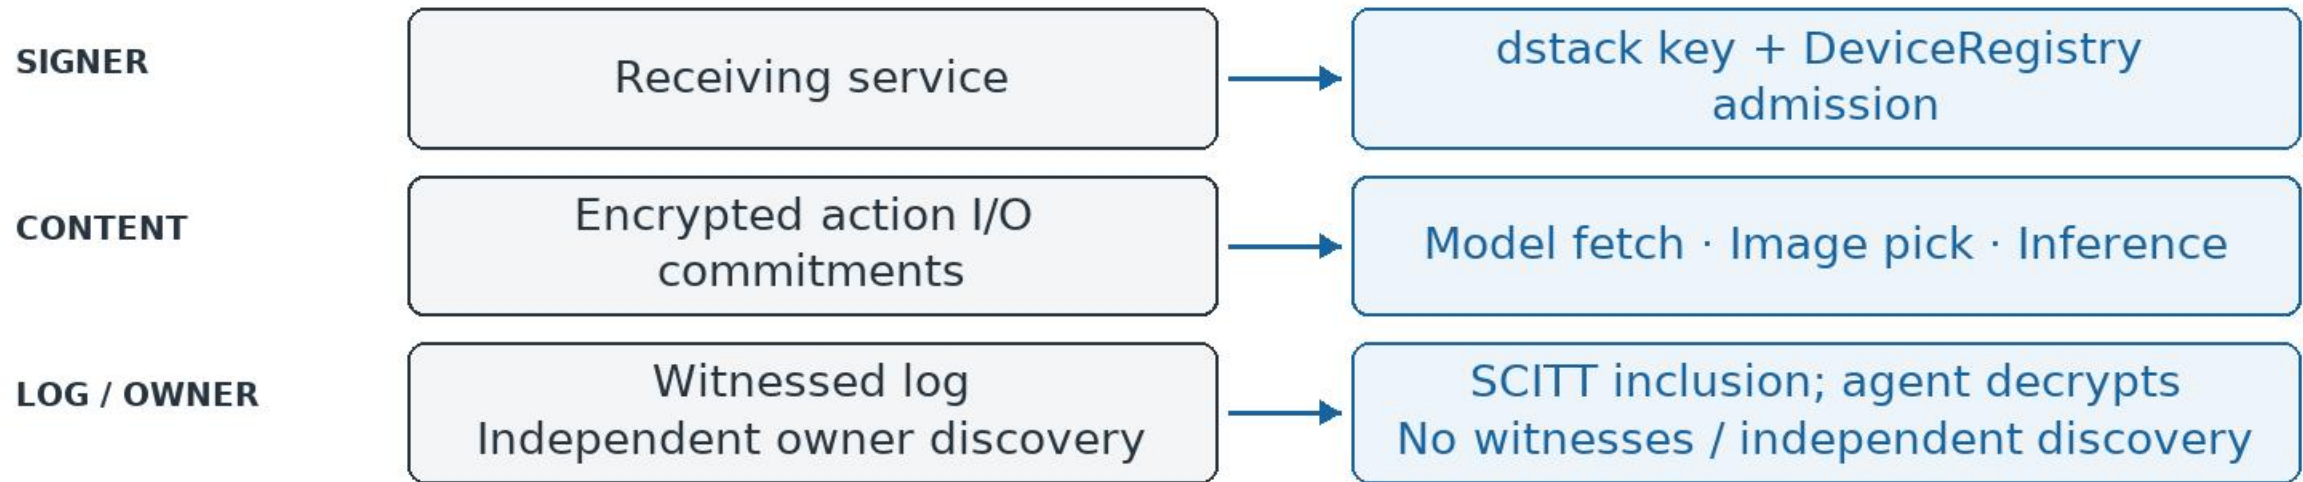

Per-call quote authenticity relies on the admitted receiver.

No independent per-call DCAP check or full replay protection.

Tsyrlunikov · AIR Internet-Draft 02 (2026) · work in progress

FIGUERA · SELLO

VITA-FL IMPLEMENTATION

Added in VITA-FL: mandatory mTLS + scoped, certificate-bound tokens

Different trust boundary: owner and issuer secrets reside in the agent runtime.

Figuera · Notarized Agents (2026) · arXiv:2606.04193

AIR: a receipt format inside a larger evidence path

AIR · DRAFT 02

VITA-FL IMPLEMENTATION

INFERENCE

Model + request + response

DFL manifest + pixels + prediction

SIGNATURE

COSE / CWT receipt
Attestation-linked signing key

dstack Ed25519 key
Per-call TDX REPORTDATA binding

VERIFICATION

Receipt validation
Separate platform appraisal

Receipt + RTMR3 / Image Digest
Per-call DCAP not implemented

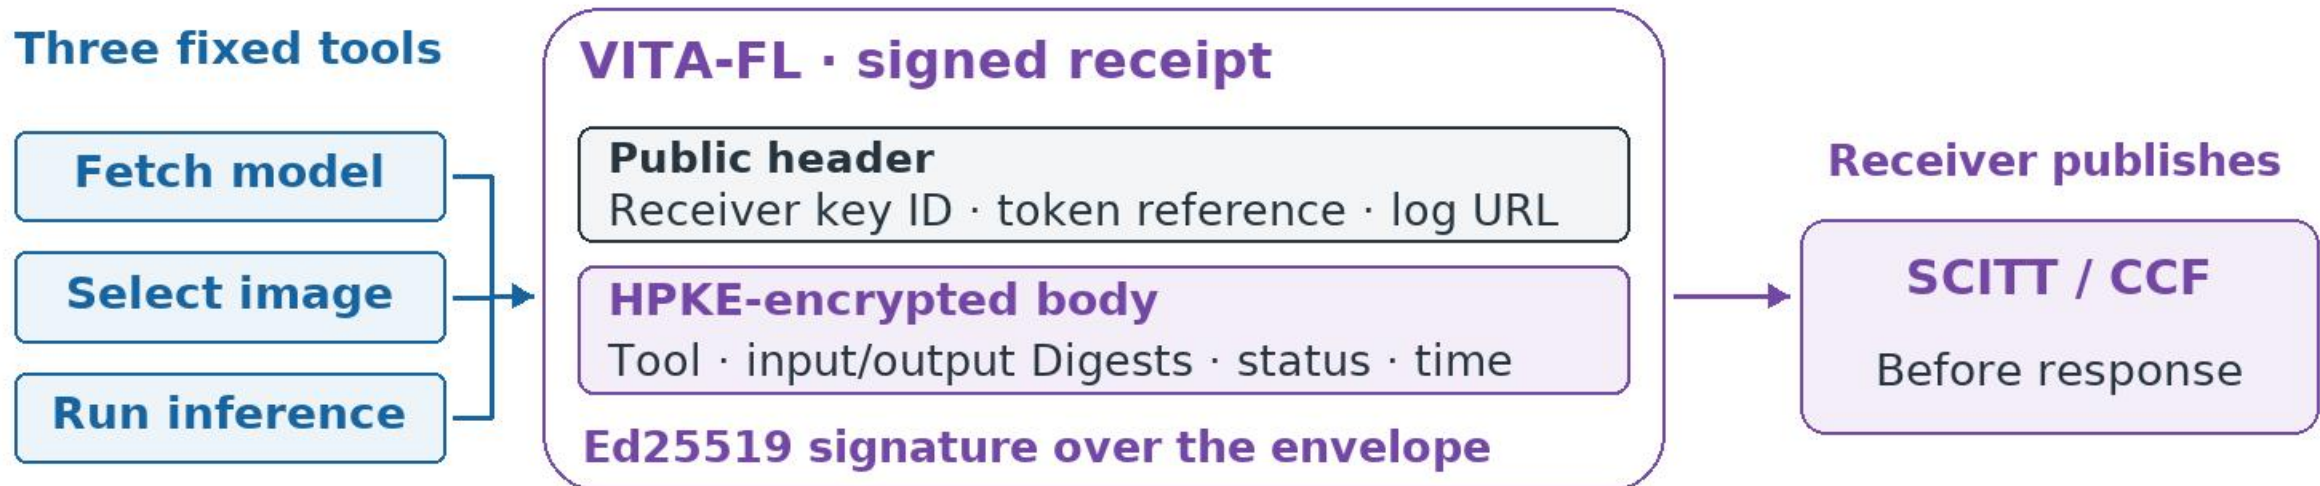

VITA-FL integration: agent publishes the complete evidence bundle to SCITT

AIR-style: trust relies on the admitted receiver; recentness is not replay protection.

Tsyrlunikov · AIR Internet-Draft 02 (2026) · work in progress

Paper: receiver-signed, owner-encrypted receipts + witnessed logging

Three fixed tools

Added: dstack key + DeviceRegistry binding · mandatory mTLS

Prototype boundary

No independent witnesses or owner discovery.
Owner keys reside in the agent runtime.

Figuera · Notarized Agents (2026) · arXiv:2606.04193

Draft: signed evidence for one inference; separate attestation appraisal

VITA-FL evidence bundle

Exact image pixels + prediction

Model manifest → DFL artifact Digest

AIR-style receipt · signed Digests

TDX quote + measured Compose + event log

Agent verifies

Signature · RTMR3 replay
Bindings + Image Digest

SCITT · published bundle

Prototype boundary

No independent DCAP appraisal per call: relies on admitted receiver.
Published bundle includes unencrypted input pixels.
