

808 implemented test definitions

Audited CI scope · current code, all profiles

TEST TYPE	COUNT	BOUNDARY / CHECKED SCOPE	CONFIGURED EXECUTION
Unit / component	731 definitions	Functions and contract logic Validation · signatures · state guards	CI · GitHub Actions Python / Node.js / Foundry
Integration	77 definitions	Real local interfaces HTTP/TLS · contracts · external tools	CI · GitHub Actions Local services, binaries and EVM
System / end-to-end	0 automated	Complete deployed workflow Training → publication → inference	1 separate Phala run 6 workers · 24 rounds + final inference
Production checks*	0 identified	Tests against the live deployment Operational behaviour under real load	No suite identified Within the audited CI scope
CI: push / pull request / manual · Ubuntu runners		+ 2 service smoke checks: Anvil + IPFS	

Static definitions, including conditional skips; parameter variants counted once. No pass count.
* Production denotes an execution context. Current-code inventory and recorded cloud run are separate evidence.
