

External tests: four questions, concrete answers

EVALUATION · EXTERNAL RESULTS · 25 + 29 SEPTEMBER 2026

Phala · 6 workers · 5 successful training rounds per run · client limit 5 · timeout 45 s

01 COLLECTION / TIMEOUT

3 / 3 PASS

When are the received updates processed?

- Allow all 5 uploads → **Close early: 16 s**
- Allow 2 uploads; block 3 → **Close at timeout: 45 s**
- Zero: block all 5 uploads → **No empty publication**

02 AGGREGATOR RECOVERY

PASS

Can voting recover a stopped aggregator?

Stop the aggregator CVM; send timeout reports.

1-2 reports: keep state → 3 of 5: abort + reselect

Resume: 5 successful rounds; all 6 workers participate.

03 ACCESS / CONTRACT GUARDS

16 / 16 PASS

Are unauthorized actions rejected?

No / wrong credentials → 10 requests return HTTP 401

- UI · Control · model download · job lookup / execution
- Stale round · wrong aggregator · unknown action key
- Non-owner policy change → 4 expected eth_call reverts
- Config unchanged · authorized inference passed**

04 PUBLISHED EVIDENCE AUDIT

17 / 17 PASS

Can receipts from the log be verified again?

- SCITT** Statement signatures + log inclusion
- AIR / TDX** Signature; model / input / output hashes
Quote; RTMR3 replay + image policy
- Sello** Signature; owner permission + tool input / output
- Sessions** Attested receiver keys + session bindings

Green = passed in these scenarios · Contracts: eth_call · Audit: shared verifier code + fresh Phala quote checks
25 Sep: recovery · 29 Sep: collection / security / audit · Separate runs; same images, changed provisioning configuration

External test catalogue: intervention and assertion

EVALUATION · EXTERNAL RESULTS · 25 + 29 SEPTEMBER 2026

Phala · 6 workers · 5 successful training rounds per run · client limit 5 · timeout 45 s

TEST AREA	TEST INPUT / INTERVENTION	WHAT WAS VERIFIED
COLLECTION 3 / 3 PASS	Allow 5 of 5 client uploads Allow 2; block the other 3 uploads Zero: block all 5 uploads	5 inputs; close before timeout at 16 s 2 inputs; close at the 45 s timeout No empty publication; then 3/5 quorum recovery
RECOVERY PASS	Stop aggregator CVM; submit reports 1 → 2 → 3 Continue training with the replacement aggregator	State preserved at 1-2; replacement at 3 of 5 5 successful rounds; all 6 workers participate
ACCESS / CONTRACTS 16 / 16 PASS	No / wrong credentials: UI / Control / model / job / run Stale round / wrong aggregator Unregistered action key / non-owner policy change Run the regular authorized agent workflow	10 × HTTP 401; config unchanged 2 calls rejected: expected eth_call reverts 2 calls rejected: expected eth_call reverts Authorized inference passed
RECEIPT AUDIT 17 / 17 PASS	Download SCITT statements + inclusion receipts Re-verify AIR and its TDX evidence Re-verify Sello receipts + attested sessions	Publisher signatures + inclusion under pinned log key Model / input / output hashes; quote, RTMR3 + image Signatures, owner permission, tool I/O + receiver keys

Green = passed in these scenarios · Contracts: eth_call · Audit: shared verifier code + fresh Phala quote checks
25 Sep: recovery · 29 Sep: collection / security / audit · Separate runs; same images, changed provisioning configuration

External tests: follow the path to the assertion

EVALUATION · EXTERNAL RESULTS · 25 + 29 SEPTEMBER 2026

Phala · 6 workers · 5 successful training rounds per run · client limit 5 · timeout 45 s

TEST AREA	INJECT / RETRIEVE	EXERCISE / VERIFY	CHECK THE RESULT
COLLECTION 3 / 3 PASS	Allow 5 / 2 / zero uploads Block the remaining client uploads	Aggregator Client limit 5 · timeout 45 s	Collection follows inputs + timeout 5: close at 16 s · 2: close at 45 s Zero: no empty publication
RECOVERY PASS	Stop the aggregator CVM Submit 1 → 2 → 3 timeout reports	Quorum vote 3 of 5 eligible workers	State preserved until quorum 1-2: unchanged · 3: abort + reselect Resume 5 rounds with all 6 workers
ACCESS / CONTRACTS 16 / 16 PASS	Send unauthorized calls No / wrong credentials Stale round / wrong aggregator Unknown key / non-owner policy change	API + contract guards UI · Control · inference APIs Contract probes via eth_call	10 × HTTP 401 + 4 expected reverts Config unchanged; authorized inference passed
RECEIPT AUDIT 17 / 17 PASS	Download published evidence SCITT · AIR/TDX · Sello · sessions	Re-run verification Signatures + log inclusion TDX quote, RTMR3 + image	Evidence binds the recorded action Model / input / output hashes; owner permission + receiver / session

Green = passed in these scenarios · Contracts: eth_call · Audit: shared verifier code + fresh Phala quote checks
25 Sep: recovery · 29 Sep: collection / security / audit · Separate runs; same images, changed provisioning configuration
